Syllabus · Classes 6–8

Make with AI

Weekend AI classes where students go from “what is AI?” to building games, chatbots and their first real code, and learn to use AI safely and honestly.

Launch offer: no admission fee for the first 51 students, plus a free demo class.

Three levels, from basics to advanced

Level 1 · Basics
Discover AI
Understand what AI is, how it learns and how to use it safely.

₹2,000 / 8 weeks

Level 2 · Builder
Make with AI
Make bigger projects that mix AI and coding.

₹2,500 / 8 weeks

Level 3 · Advanced
Code with AI
Move from blocks to real typed code.

₹3,000 / 8 weeks

Fee per student for the full 8-week level.

How the classes run

Every weekend
Saturday: learn a new idea and build it together. Sunday: build your own version, then show and tell. A small task between weekends.

Every level
8 weeks, 16 one-hour classes. Ends with an online showcase for parents.

Small batches
10–15 students, live online on Google Meet.

Where to start
Everyone starts at Level 1. Students with prior experience can start higher after the free demo.

What students need
Classes are live online on Google Meet. Level 1 works on a phone or computer; a laptop or computer is needed for Levels 2 and 3. No coding knowledge is needed to start.

Takes home: A game and a chatbot they built themselves.

Safety and honest use
- ✓ Students under 13 never log in to AI chatbots. The teacher types and shares the screen, and the class decides together.
- ✓ Every level covers privacy, fake pictures and checking facts.
- ✓ AI is for learning and practice, never for copying homework.
- ✓ No photos of students' faces are shared without permission.

Level 1 · Basics · 8 weeks · 16 classes

Discover AI

₹2,000

Fee per student for the full 8-week level.

GOAL

Understand what AI is, how it learns and how to use it safely.

WHAT STUDENTS BUILD

A picture-recognising AI model and a first Scratch game.

TOOLS AND DEVICE

Quick Draw, Teachable Machine, Scratch. Phone or computer.

Week	What happens in class	Task at home
1	**What is AI? Spotting AI around us: maps, YouTube, voice assistants** "AI or not AI?" game, then Quick Draw on your own device	Find 3 places AI is used at home and tell a parent
2	**How computers learn from examples: train a model to recognise pictures** Train Teachable Machine to recognise objects, and see what bad examples do	Draw 5 things for a family member to guess
3	**Talking to AI: asking clear questions and checking the answers** Students write questions, the teacher types them and shares the screen; compare unclear and clear questions, catch a wrong answer	Write 3 clear questions on a subject you are studying
4	**Scratch basics: characters, movement and loops** Move a character, add sounds, use loops	Make a character dance to music
5	**Make your first game in Scratch** Build a "catch the falling object" game with a score	Add one new idea to your game
6	**AI for studies: flashcards and quizzes the right way** Make flashcards and a quiz from a chapter (the teacher types), then check them against the textbook	Quiz a parent with your flashcards
7	**Online safety: privacy, deepfakes and fake news** Real or fake picture game, privacy rules, checking fake news	Teach your family the 5 golden rules
8	**Mini project and showcase for parents** Finish your game and present it to parents	Celebrate!

Level 2 · Builder · 8 weeks · 16 classes

Make with AI

₹2,500

Fee per student for the full 8-week level.

GOAL

Make bigger projects that mix AI and coding.

WHAT STUDENTS BUILD

A multi-level game controlled by your own AI model, and a subject chatbot.

TOOLS AND DEVICE

Scratch, Teachable Machine with a Scratch extension. Laptop or computer.

Week	What happens in class	Task at home
1	**Game design: plan a game with goals, scores and levels** Plan a game on paper: story, goal, score and levels	Sketch one level of your game
2	**Build a bigger Scratch game with levels and a score** Add levels, score, lives and a timer using variables	Let a family member play it and note one problem
3	**Train an AI model to recognise drawings or hand gestures** Collect examples in teams, train, test and improve the model	Think of 3 hand signs your game could use
4	**Use your AI model inside your Scratch game** Connect the model so a hand sign moves your character	Play-test and fix one bug
5	**Build a chatbot about a favourite school subject** Build it in Scratch with questions, answers and a quiz mode, then compare it with a real AI chatbot	Add 5 more facts from your textbook
6	**AI images and stories: creativity, honesty and copyright** The teacher makes pictures and stories from students' ideas on a shared screen; talk about honesty, copyright and labelling AI work	Write a short story idea for a comic
7	**Make a personal study planner with AI** Plan a weekly study timetable with AI on a shared screen, then turn it into your own poster	Follow your planner for one week
8	**Project week and showcase** Finish your game or chatbot and present it	Celebrate!

Level 3 · Advanced · 8 weeks · 16 classes

Code with AI

₹3,000

Fee per student for the full 8-week level.

GOAL

Move from blocks to real typed code.

WHAT STUDENTS BUILD

A Python quiz game, a simple chatbot and a web page about yourself.

TOOLS AND DEVICE

Python (Thonny, free), HTML in a text editor. Laptop or computer.

Week	What happens in class	Task at home
1	**Start Python: drawing shapes and patterns with code** Draw shapes and patterns with Python turtle	Draw your initials with code
2	**Variables, loops and conditions through mini games** Build a guess-the-number game	Change the rules of the game
3	**Build a quiz game in Python** Questions, a score and a final result	Add 5 questions on your favourite subject
4	**How chatbots work: build a simple chatbot in Python** Build a keyword chatbot and see how real AI chatbots are different	Teach your chatbot 5 new replies
5	**Data and charts: run a class survey and chart the results** Enter class survey data and draw a bar chart with Python	Ask your family one survey question
6	**Build a web page about yourself with HTML** Headings, pictures, lists and links in HTML (no address, phone or other personal details)	Add a section about your hobby
7	**Final project build with teacher support** Pick a game, chatbot or web page and build it with teacher help	Practise your presentation
8	**Showcase: present your project to parents** Present your project to parents	Celebrate!
