Syllabus · Classes 9–12

Build and Study with AI

Weekend AI classes where students learn to study smarter for boards, JEE and NEET, then build and publish real websites, apps and Python AI projects.

Launch offer: no admission fee for the first 51 students, plus a free demo class.

Three levels, from basics to advanced

Level 1 · Basics

AI for Study and Life

Use AI to study better and honestly, and know where it goes wrong.

₹4,000 / 8 weeks

Level 2 · Builder

Build with AI

Build and publish a real website and web app.

₹4,500 / 8 weeks

Level 3 · Advanced

Python and AI Projects

Learn Python, data and machine learning basics through projects.

₹5,000 / 8 weeks

Fee per student for the full 8-week level.

How the classes run

Every weekend
Saturday: learn a new idea and build it together. Sunday: build your own version, then show and tell. A small task between weekends.

Every level
8 weeks, 16 one-hour classes. Ends with an online showcase for parents.

Small batches
10–15 students, live online on Google Meet.

Where to start
Everyone starts at Level 1. Students with prior experience can start higher after the free demo.

What students need

Classes are live online on Google Meet. Level 1 works on a phone or computer; a laptop or computer is needed for Levels 2 and 3. No coding knowledge is needed to start.

Takes home: A live website or app and a project they can show colleges.

Safety and honest use

- ✓ Students use AI chatbots only with parent permission and never share personal details.
- ✓ Every AI answer is checked against NCERT, teachers or trusted sources.
- ✓ AI is for understanding and practice, never for copying homework or cheating in exams.
- ✓ Every level covers privacy, deepfakes and scams.

Level 1 · Basics · 8 weeks · 16 classes

AI for Study and Life

₹4,000

Fee per student for the full 8-week level.

GOAL

Use AI to study better and honestly, and know where it goes wrong.

WHAT STUDENTS BUILD

A personal AI study system: revision plan, question bank and flashcards.

TOOLS AND DEVICE

A free AI chatbot (with parent permission), NCERT books, Google Docs and Sheets. Phone or computer.

Week	What happens in class	Task at home
1	**How AI and chatbots really work, and why they make mistakes** Next-word guessing game, then catch AI making mistakes	Find one wrong AI answer and the correct source
2	**Asking AI good questions: clear prompts that get useful answers** Role, task and format: rewrite weak prompts into strong ones	Make your own list of 5 study prompts
3	**AI for board exams: revision plans and practice questions** Make a revision timetable up to exam day, and practice questions from your syllabus	Follow the plan for one week
4	**AI for JEE and NEET concepts: explain, then verify with NCERT** Get a hard concept explained step by step, then check every step against NCERT	Explain one concept to a friend without AI
5	**Research and fact-checking: sources and academic honesty** Compare sources, cite them, and learn the rules on copying and plagiarism	Fact-check one viral message
6	**Notes, summaries and flashcards that help you remember** Turn a chapter into short notes and flashcards, and plan spaced revision	Make flashcards for one chapter
7	**Safety: privacy, deepfakes and scams** Privacy settings, spotting deepfakes, common scams like OTP and fake job offers	Show your family how to spot one scam
8	**Project: your personal AI study system, plus showcase** Present your study system and how you will use it	Celebrate!

Level 2 · Builder · 8 weeks · 16 classes

Build with AI

₹4,500

Fee per student for the full 8-week level.

GOAL

Build and publish a real website and web app.

WHAT STUDENTS BUILD

A personal portfolio website and a small web app, both live online.

TOOLS AND DEVICE

VS Code, HTML, CSS, JavaScript, an AI coding assistant, GitHub and free hosting. Laptop or computer.

Week	What happens in class	Task at home
1	**How websites work: HTML and CSS basics** Browsers, servers and code: inspect a real site and make your first page	Plan what goes on your portfolio
2	**Build your personal portfolio website** Build the About, Skills, Projects and Contact sections	Write your About text
3	**Using AI as a coding assistant, and checking its code** Ask AI for code, read it, test it and fix its mistakes	Find and fix one bug
4	**JavaScript basics: make pages interactive** Buttons, events and changing the page with code	Add a dark mode button
5	**Build a web app: a quiz, planner or to-do app** Build a quiz, planner or to-do app that saves data in the browser	Add one feature of your own
6	**Publish your website online for free** Put your site on GitHub and publish it with free hosting	Share your link with family
7	**Project week with teacher reviews** The teacher reviews your code; you polish the design and fix issues	Fix your review comments
8	**Showcase: a live website you can share** Present your live website and app	Celebrate!

Level 3 · Advanced · 8 weeks · 16 classes

Python and AI Projects

₹5,000

Fee per student for the full 8-week level.

GOAL

Learn Python, data and machine learning basics through projects.

WHAT STUDENTS BUILD

A data analysis notebook, a trained model and a final AI project on GitHub.

TOOLS AND DEVICE

Python, Google Colab, pandas, matplotlib, scikit-learn, GitHub. Laptop or computer.

Week	What happens in class	Task at home
1	**Python basics for real projects** Variables, lists, loops and functions through small programs	Write a marks calculator
2	**Working with data: lists, files and spreadsheets** Read a spreadsheet file, filter and sort the data	Collect a small dataset of your own
3	**Charts and analysis with Python** Make charts with pandas and matplotlib and find patterns	Make 2 charts from your dataset
4	**How machine learning works: train your first model** Train a simple model, test how accurate it is, talk about bias	Test your model with new data
5	**Connect a Python app to an AI model** Use a trained model or an AI API inside your own app (teacher's account in class)	Plan your final project
6	**Build a project: a study helper or an image recogniser** Build your project step by step with teacher help	Keep building and note your questions
7	**Portfolio and GitHub for college applications** Write a README, push your code and learn to describe your projects	Finish your README
8	**Showcase and careers in AI** Present your project and talk about careers in AI and tech	Celebrate!
