manish.

For Manish only · not for parents or schools

AI classes: teacher prep guide

Both courses, all three levels, week by week. For each week: the topic, what happens in class, the home task, what to prepare and what to watch out for. Tick the boxes as you prepare and use the notes lines after each class.

The six levels

Course	Level	Students build	Fee
Classes 6–8	**Level 1 · Basics** · Discover AI	A picture-recognising AI model and a first Scratch game.	₹2,000
Classes 6–8	**Level 2 · Builder** · Make with AI	A multi-level game controlled by your own AI model, and a subject chatbot.	₹2,500
Classes 6–8	**Level 3 · Advanced** · Code with AI	A Python quiz game, a simple chatbot and a web page about yourself.	₹3,000
Classes 9–12	**Level 1 · Basics** · AI for Study and Life	A personal AI study system: revision plan, question bank and flashcards.	₹4,000
Classes 9–12	**Level 2 · Builder** · Build with AI	A personal portfolio website and a small web app, both live online.	₹4,500
Classes 9–12	**Level 3 · Advanced** · Python and AI Projects	A data analysis notebook, a trained model and a final AI project on GitHub.	₹5,000

Every weekend: Sat + Sun, 1 hour each

Sat 0:00	Welcome, recap last week, check home tasks (2–3 students share)
Sat 0:10	New idea: explain with a live demo, a game or a question
Sat 0:25	Guided build: everyone follows your shared screen step by step
Sun 0:00	Quick recap, fix problems left from Saturday
Sun 0:10	Own build or challenge; students share their screen when stuck
Sun 0:45	Show and tell, give the home task, note one line for parents

Before every class

- [ ] Build this week's project yourself, end to end, on a normal laptop (and on a phone for Level 1)
- [ ] Send the Google Meet link and starter files on the WhatsApp group the day before
- [ ] Check your mic, camera, screen share and internet; keep a phone hotspot as backup
- [ ] Keep a backup: screenshots or a screen recording of the build
- [ ] Step sheet for the guided build, shared as a PDF or Google Doc
- [ ] Attendance, and a shared Drive folder where students upload their work (name_week.ext)
- [ ] After class: short WhatsApp update to parents (what we did, home task, no student faces)

Safety rules, always

- Classes 6–8: students never log in to AI chatbots or image tools. Only you type, on your shared screen.
- Never type a student's name, school or photo into any AI tool.
- No recordings or screenshots of student faces unless parents agree in writing.
- AI is for learning and practice. If you see copied homework, talk to the student, not the class.
- Never promise jobs, placements, marks or admissions.
- Classes 9–12: AI accounts and GitHub only with parent permission (both need age 13+).

Classes 6–8 · Make with AI · Level 1 · Basics · ₹2,000 · 8 weeks

Discover AI

Goal: Understand what AI is, how it learns and how to use it safely.
Students build: A picture-recognising AI model and a first Scratch game.

Before Week 1

- [ ] Ask parents to check that quickdraw.withgoogle.com, teachablemachine.withgoogle.com and scratch.mit.edu open on the child's device
- [ ] Each child needs a webcam (laptop or phone) from Week 2; ask parents to allow camera access in the browser
- [ ] Share the Scratch offline app link with families who have slow internet
- [ ] Your own AI chatbot logged in on your laptop only; no student accounts
- [ ] Students on phones: Scratch is hard on a small screen; ask parents for a laptop or tablet from Week 4

Tools: Quick Draw, Teachable Machine, Scratch. Phone or computer.

Week 1 What is AI? Spotting AI around us: maps, YouTube, voice assistants

IN CLASS

"AI or not AI?" game, then Quick Draw on your own device

HOME TASK

Find 3 places AI is used at home and tell a parent

My notes

PREPARE

- [ ] 12 "AI or not AI?" examples on slides or cards (workshop slides 2–6 work)
- [ ] Quick Draw tested on a phone and a laptop
- [ ] Short screen recording of Quick Draw as backup

Watch out: If a child's internet is slow, share your screen and let them call out what to draw.

Week 2 How computers learn from examples: train a model to recognise pictures

IN CLASS

Train Teachable Machine to recognise objects, and see what bad examples do

HOME TASK

Draw 5 things for a family member to guess

My notes

PREPARE

- [ ] Train a demo model yourself on 3 objects (pen, bottle, book)
- [ ] A second "bad" model with only 5 pictures from one angle, to show failure
- [ ] Webcams tested

Watch out: Students record too few pictures from one angle. Push for 50+ per class and a "nothing" class.

Week 3 Talking to AI: asking clear questions and checking the answers

IN CLASS

Students write questions, the teacher types them and shares the screen; compare unclear and clear questions, catch a wrong answer

HOME TASK

Write 3 clear questions on a subject you are studying

My notes

PREPARE

- [ ] 6 prompt pairs ready: unclear vs clear
- [ ] 1–2 questions where AI gives a wrong answer (test beforehand, e.g. counting letters in a long word)
- [ ] Textbook page to check the answer

Watch out: Only you type. Never put a student's name or school into the chatbot.

Week 4 Scratch basics: characters, movement and loops

IN CLASS

Move a character, add sounds, use loops

HOME TASK

Make a character dance to music

My notes

PREPARE

- [ ] Scratch starter project with 2–3 sprites
- [ ] A finished “dance” demo
- [ ] Block cheat sheet: motion, looks, sound, repeat, forever

Watch out: Kids spend ages picking sprites and costumes. Give a 5-minute limit.

Week 5 Make your first game in Scratch

IN CLASS

Build a “catch the falling object” game with a score

HOME TASK

Add one new idea to your game

My notes

PREPARE

- [ ] Build the catch game yourself: falling object, basket, score variable
- [ ] Step card as a PDF
- [ ] Starter file with sprites in the Drive folder

Watch out: Save every game as name_week5.sb3 and upload it to the Drive folder, or it is lost.

Week 6 AI for studies: flashcards and quizzes the right way

IN CLASS

Make flashcards and a quiz from a chapter (the teacher types), then check them against the textbook

HOME TASK

Quiz a parent with your flashcards

My notes

PREPARE

- [ ] Pick one NCERT chapter each for Classes 6, 7 and 8 (science or SST)
- [ ] Textbook pages to check AI answers
- [ ] Blank flashcard sheets

Watch out: Make sure the class sees at least one AI mistake and fixes it with the textbook.

Week 7 Online safety: privacy, deepfakes and fake news

IN CLASS

Real or fake picture game, privacy rules, checking fake news

HOME TASK

Teach your family the 5 golden rules

My notes

PREPARE

- [ ] 8–10 pictures: half real (free stock), half AI-made (make them beforehand)
- [ ] 2 harmless fake news examples
- [ ] 5 golden rules poster

Watch out: No pictures of real people or politicians. Keep it light, not scary.

Week 8 Mini project and showcase for parents

IN CLASS

Finish your game and present it to parents

HOME TASK

None. Celebrate!

My notes

PREPARE

- [ ] WhatsApp invite to parents one week before, with date and time
- [ ] Showcase order list (1–2 minutes per child)
- [ ] Short parent feedback form (Google Form)
- [ ] Level 2 details: start date and fee

Watch out: Every child presents, even shy ones (let them present with a partner). No screenshots of faces without written permission.

Classes 6–8 · Make with AI · Level 2 · Builder · ₹2,500 · 8 weeks

Make with AI

Goal: Make bigger projects that mix AI and coding.
Students build: A multi-level game controlled by your own AI model, and a subject chatbot.

Before Week 1

- [ ] Laptops or computers needed for every student from this level
- [ ] Choose how the AI model goes into Scratch: Stretch3 (stretch3.github.io, TM2Scratch extension) or PictoBlox. Test one fully before Week 1
- [ ] Collect students' Level 1 games so they can reuse sprites
- [ ] Ask students to sit in good light with a plain background for the gesture weeks

Tools: Scratch, Teachable Machine with a Scratch extension. Laptop or computer.

Week 1 Game design: plan a game with goals, scores and levels

IN CLASS

Plan a game on paper: story, goal, score and levels

HOME TASK

Sketch one level of your game

My notes

PREPARE

- [ ] Game planning sheet: story, character, goal, score, levels, how you lose
- [ ] 2–3 simple games to play first for ideas

Watch out: Kids plan huge games. Push “small and finished” over “big and half-done”.

Week 2 Build a bigger Scratch game with levels and a score

IN CLASS

Add levels, score, lives and a timer using variables

HOME TASK

Let a family member play it and note one problem

My notes

PREPARE

- [ ] Demo with score, lives, timer and a level change (broadcast)
- [ ] Variables cheat sheet

Watch out: Confusion between “for all sprites” and “for this sprite only” variables.

Week 3 Train an AI model to recognise drawings or hand gestures

IN CLASS

Collect examples in teams, train, test and improve the model

HOME TASK

Think of 3 hand signs your game could use

My notes

PREPARE

- [ ] Demo gesture model (up, down, left, right or rock-paper-scissors) with a “nothing” class
- [ ] Plain background and good light

Watch out: Models fail when trained on one hand or one background. Mix hands and angles.

Week 4 Use your AI model inside your Scratch game

IN CLASS

Connect the model so a hand sign moves your character

HOME TASK

Play-test and fix one bug

My notes

PREPARE

- [ ] Test the full path: train → upload model → link in Scratch → control a sprite
- [ ] Step card for this path
- [ ] Backup: keyboard controls if the camera fails

Watch out: Only the model is uploaded, not the photos. Test the model link on a slow connection too.

Week 5 Build a chatbot about a favourite school subject

IN CLASS

Build it in Scratch with questions, answers and a quiz mode, then compare it with a real AI chatbot

HOME TASK

Add 5 more facts from your textbook

My notes

PREPARE

- [ ] Scratch chatbot template: ask and wait, if answer contains keyword, say
- [ ] 10 facts per subject from textbooks
- [ ] Real AI chatbot on your laptop to compare

Watch out: Keyword matching breaks on spelling and capitals. Teach “contains” and lower-case answers.

Week 6 AI images and stories: creativity, honesty and copyright

IN CLASS

The teacher makes pictures and stories from students' ideas on a shared screen; talk about honesty, copyright and labelling AI work

HOME TASK

Write a short story idea for a comic

My notes

PREPARE

- [ ] Collect story ideas from students in Week 5
- [ ] Make images on your account (check them before class)
- [ ] Copyright examples: cartoon character, brand logo
- [ ] A “Made with AI” label

Watch out: No images of real people or classmates. Check every output before you share it on screen.

Week 7 Make a personal study planner with AI

IN CLASS

Plan a weekly study timetable with AI on a shared screen, then turn it into your own poster

HOME TASK

Follow your planner for one week

My notes

PREPARE

- [ ] Blank weekly timetable template
- [ ] Chart paper and colours, or a Google Slides template
- [ ] Your AI chat ready to share on screen

Watch out: AI timetables are too packed. Keep play, rest and family time in the plan.

Week 8 Project week and showcase

IN CLASS

Finish your game or chatbot and present it

HOME TASK

None. Celebrate!

My notes

PREPARE

- [ ] Same showcase checklist as Level 1
- [ ] Level 3 details: Python, laptop needed

Watch out: Run each game once before parents join the call, so nothing fails live.

Classes 6–8 · Make with AI · Level 3 · Advanced · ₹3,000 · 8 weeks

Code with AI

Goal: Move from blocks to real typed code.
Students build: A Python quiz game, a simple chatbot and a web page about yourself.

Before Week 1

- [ ] Send parents Thonny install steps (thonny.org, includes Python); hold a 10-minute setup call before Week 1
- [ ] Students install matplotlib in Thonny (Tools → Manage packages) during the setup call
- [ ] A text editor (VS Code or Notepad++) and a browser for HTML
- [ ] Starter files for every week in the shared Drive folder

Tools: Python (Thonny, free), HTML in a text editor. Laptop or computer.

Week 1 Start Python: drawing shapes and patterns with code

IN CLASS

Draw shapes and patterns with Python turtle

HOME TASK

Draw your initials with code

My notes

PREPARE

- [ ] Turtle cheat sheet: forward, left, right, penup, color, for loop
- [ ] Demos: square, star, spiral

Watch out: Indentation and typos. Teach them to read the error message first.

Week 2 Variables, loops and conditions through mini games

IN CLASS

Build a guess-the-number game

HOME TASK

Change the rules of the game

My notes

PREPARE

- [ ] Guess-the-number code with input(), int(), if/elif/else, while

Watch out: input() gives text. Show why int() is needed.

Week 3 Build a quiz game in Python

IN CLASS

Questions, a score and a final result

HOME TASK

Add 5 questions on your favourite subject

My notes

PREPARE

- [ ] Quiz with a list of questions and a score
- [ ] 5 sample questions

Watch out: Answers do not match because of capitals and spaces. Use .lower().strip().

Week 4 How chatbots work: build a simple chatbot in Python

IN CLASS

Build a keyword chatbot and see how real AI chatbots are different

HOME TASK

Teach your chatbot 5 new replies

My notes

PREPARE

- [ ] Keyword chatbot using a dictionary
- [ ] Real AI chatbot on your shared screen to compare (you type)

Watch out: Explain honestly: our bot follows rules; real AI learned patterns from huge amounts of text.

Week 5 Data and charts: run a class survey and chart the results

IN CLASS

Enter class survey data and draw a bar chart with Python

HOME TASK

Ask your family one survey question

My notes

PREPARE

- [ ] 3-question class survey (favourite sport, subject, snack)
- [ ] matplotlib bar chart example
- [ ] Turtle bar chart as backup

Watch out: Use only class survey data, never personal details.

Week 6 Build a web page about yourself with HTML

IN CLASS

Headings, pictures, lists and links in HTML (no address, phone or other personal details)

HOME TASK

Add a section about your hobby

My notes

PREPARE

- [ ] HTML starter with head and body
- [ ] A sample page
- [ ] Images folder with their own drawings or free images

Watch out: No address, phone, school name or face photos on the page.

Week 7 Final project build with teacher support

IN CLASS

Pick a game, chatbot or web page and build it with teacher help

HOME TASK

Practise your presentation

My notes

PREPARE

- [ ] List of project choices
- [ ] Minimum checklist for each choice
- [ ] 1:1 time slots

Watch out: Finish the basic version first, add extras later.

Week 8 Showcase: present your project to parents

IN CLASS

Present your project to parents

HOME TASK

None. Celebrate!

My notes

PREPARE

- [ ] Showcase checklist
- [ ] What next: practice ideas, and the Classes 9–12 course later

Watch out: Have every project open and tested before parents join the call.

Classes 9–12 · Build and Study with AI · Level 1 · Basics · ₹4,000 · 8 weeks

AI for Study and Life

Goal: Use AI to study better and honestly, and know where it goes wrong.

Students build: A personal AI study system: revision plan, question bank and flashcards.

Before Week 1

- [ ] Written parent permission for students to use a free AI chatbot (they must be 13+)
- [ ] Intro form: each student's board, subjects and goals (boards, JEE, NEET)
- [ ] NCERT PDFs for their subjects (ncert.nic.in)
- [ ] A Google account for Docs and Sheets; phones are fine for this level

Tools: A free AI chatbot (with parent permission), NCERT books, Google Docs and Sheets. Phone or computer.

Week 1 How AI and chatbots really work, and why they make mistakes

IN CLASS

Next-word guessing game, then catch AI making mistakes

HOME TASK

Find one wrong AI answer and the correct source

My notes

PREPARE

- [ ] Next-word guessing game: 5 sentences with a blank
- [ ] 3–4 prompts where AI makes mistakes (test beforehand)
- [ ] Intro form

Watch out: The goal is “check, don't blindly trust”, not “AI is useless”.

Week 2 Asking AI good questions: clear prompts that get useful answers

IN CLASS

Role, task and format: rewrite weak prompts into strong ones

HOME TASK

Make your own list of 5 study prompts

My notes

PREPARE

- [ ] 5 weak prompts from real student needs
- [ ] Prompt formula card: role + task + context + format
- [ ] Shared doc for their prompt library

Watch out: Show “quiz me on this” vs “give me the answer”. Ban “do my homework” prompts.

Week 3 AI for board exams: revision plans and practice questions

IN CLASS

Make a revision timetable up to exam day, and practice questions from your syllabus

HOME TASK

Follow the plan for one week

My notes

PREPARE

- [ ] Real exam dates (board date sheet when out) and syllabus PDFs
- [ ] Google Sheets timetable template

Watch out: AI plans are too ambitious. Add buffer days, sleep and school hours.

Week 4 AI for JEE and NEET concepts: explain, then verify with NCERT

IN CLASS

Get a hard concept explained step by step, then check every step against NCERT

HOME TASK

Explain one concept to a friend without AI

My notes

PREPARE

- [ ] 3 hard concepts (e.g. electromagnetic induction, mole concept, meiosis)
- [ ] NCERT pages for each
- [ ] One AI explanation mistake found beforehand

Watch out: You are teaching a study method, not the subject. Tell them to confirm with their school or coaching teacher.

Week 5 Research and fact-checking: sources and academic honesty

IN CLASS

Compare sources, cite them, and learn the rules on copying and plagiarism

HOME TASK

Fact-check one viral message

My notes

PREPARE

- [ ] One harmless viral forward to fact-check
- [ ] Fact-check sources (e.g. PIB Fact Check)
- [ ] Example of how to cite a source

Watch out: Avoid political or religious forwards.

Week 6 Notes, summaries and flashcards that help you remember

IN CLASS

Turn a chapter into short notes and flashcards, and plan spaced revision

HOME TASK

Make flashcards for one chapter

My notes

PREPARE

- [ ] One chapter PDF
- [ ] Flashcard tool (Google Sheets is enough)
- [ ] Spaced revision calendar template

Watch out: Notes must be in their own words. AI only checks what they missed.

Week 7 Safety: privacy, deepfakes and scams

IN CLASS

Privacy settings, spotting deepfakes, common scams like OTP and fake job offers

HOME TASK

Show your family how to spot one scam

My notes

PREPARE

- [ ] Real scam examples: OTP, fake job, loan app, lottery
- [ ] Deepfake examples from news
- [ ] Privacy settings walkthrough for WhatsApp and Instagram

Watch out: Sensitive topic. Share the cyber crime helpline 1930 and cybercrime.gov.in, and tell them to talk to parents.

Week 8 Project: your personal AI study system, plus showcase

IN CLASS

Present your study system and how you will use it

HOME TASK

None. Celebrate!

My notes

PREPARE

- [ ] Showcase checklist
- [ ] Level 2 details: laptop needed

Watch out: Each student shows their own study system, not a copy of a friend's.

Classes 9–12 · Build and Study with AI · Level 2 · Builder · ₹4,500 · 8 weeks

Build with AI

Goal: Build and publish a real website and web app.
Students build: A personal portfolio website and a small web app, both live online.

Before Week 1

- [ ] Laptops needed for every student
- [ ] Install VS Code with the Live Server extension, and Chrome
- [ ] Turn on "show file extensions" on Windows computers
- [ ] A free AI chatbot in the browser is enough as the coding assistant
- [ ] Your own sample portfolio and finished versions of all three apps

Tools: VS Code, HTML, CSS, JavaScript, an AI coding assistant, GitHub and free hosting. Laptop or computer.

Week 1 How websites work: HTML and CSS basics

IN CLASS

Browsers, servers and code: inspect a real site and make your first page

HOME TASK

Plan what goes on your portfolio

My notes

PREPARE

- [ ] Inspect a well-known site with browser dev tools
- [ ] A "hello" HTML file
- [ ] Simple drawing of browser ↔ server

Watch out: Hidden file extensions on Windows create index.html.txt. Check before class.

Week 2 Build your personal portfolio website

IN CLASS

Build the About, Skills, Projects and Contact sections

HOME TASK

Write your About text

My notes

PREPARE

- [ ] Portfolio starter template (HTML + CSS, sections)
- [ ] List of free image and icon sources

Watch out: No phone, address or school photos. First name and city are enough.

Week 3 Using AI as a coding assistant, and checking its code

IN CLASS

Ask AI for code, read it, test it and fix its mistakes

HOME TASK

Find and fix one bug

My notes

PREPARE

- [ ] 2–3 prompts that give code with a bug (test beforehand)
- [ ] Rule card: never paste code you cannot explain

Watch out: Students paste long AI code they do not understand. Ask them to explain it line by line.

Week 4 JavaScript basics: make pages interactive

IN CLASS

Buttons, events and changing the page with code

HOME TASK

Add a dark mode button

My notes

PREPARE

- [ ] JS demos: button changes text, colour toggle, dark mode
- [ ] Browser console demo

Watch out: Script tag in the wrong place and typos. Teach the console early.

Week 5 Build a web app: a quiz, planner or to-do app

IN CLASS

Build a quiz, planner or to-do app that saves data in the browser

HOME TASK

Add one feature of your own

My notes

PREPARE

- [ ] Three starters: quiz, planner, to-do (localStorage)
- [ ] Finished versions for reference

Watch out: Scope. Also explain that localStorage data stays only in that browser.

Week 6 Publish your website online for free

IN CLASS

Put your site on GitHub and publish it with free hosting

HOME TASK

Share your link with family

My notes

PREPARE

- [ ] Ask students in Week 5 to create a GitHub account at home with a parent (email check needed)
- [ ] Step card: create username.github.io repo, upload files, Settings → Pages
- [ ] Students share their screen while publishing, so you can spot mistakes

Watch out: Site can take a few minutes to go live. Keep a second task ready while waiting.

Week 7 Project week with teacher reviews

IN CLASS

The teacher reviews your code; you polish the design and fix issues

HOME TASK

Fix your review comments

My notes

PREPARE

- [ ] Review checklist: works on phone, links work, spelling, no personal info
- [ ] 1:1 review slots

Watch out: Give at most 3 points per student, so they finish.

Week 8 Showcase: a live website you can share

IN CLASS

Present your live website and app

HOME TASK

None. Celebrate!

My notes

PREPARE

- [ ] Each student's live link ready to open on screen
- [ ] Showcase checklist
- [ ] Level 3 details

Watch out: Open every live link before parents join the call.

Classes 9–12 · Build and Study with AI · Level 3 · Advanced · ₹5,000 · 8 weeks

Python and AI Projects

Goal: Learn Python, data and machine learning basics through projects.
Students build: A data analysis notebook, a trained model and a final AI project on GitHub.

Before Week 1

- [ ] Google account for Google Colab (13+), with local Python + Jupyter as a backup
- [ ] 2–3 small clean CSV datasets (e.g. public cricket stats, Rewari weather, anonymous survey)
- [ ] GitHub accounts from Level 2 (create for new students)
- [ ] AI API key on your own account with a low spending limit. Keep it out of student code and GitHub

Tools: Python, Google Colab, pandas, matplotlib, scikit-learn, GitHub. Laptop or computer.

Week 1 Python basics for real projects

IN CLASS

Variables, lists, loops and functions through small programs

HOME TASK

Write a marks calculator

My notes

PREPARE

- [ ] Colab notebook with exercises
- [ ] Marks calculator example

Watch out: Colab resets. Students must save a copy to their Drive.

Week 2 Working with data: lists, files and spreadsheets

IN CLASS

Read a spreadsheet file, filter and sort the data

HOME TASK

Collect a small dataset of your own

My notes

PREPARE

- [ ] CSV datasets ready
- [ ] pandas snippets: read_csv, filter, sort
- [ ] Ask students for their own dataset idea

Watch out: Uploaded files vanish when the Colab session ends. Keep data in Drive.

Week 3 Charts and analysis with Python

IN CLASS

Make charts with pandas and matplotlib and find patterns

HOME TASK

Make 2 charts from your dataset

My notes

PREPARE

- [ ] Chart examples: bar, line, scatter
- [ ] "Find a pattern" questions for each chart

Watch out: Messy data. Show dropna and checking column types.

Week 4 How machine learning works: train your first model

IN CLASS

Train a simple model, test how accurate it is, talk about bias

HOME TASK

Test your model with new data

My notes

PREPARE

- [ ] Small dataset for classification (e.g. iris, or study hours vs pass/fail)
- [ ] Train/test split demo
- [ ] A bias example: model trained on one group only

Watch out: Keep the maths light. Focus on the idea: learn from examples, test on new ones.

Week 5 Connect a Python app to an AI model

IN CLASS

Use a trained model or an AI API inside your own app (teacher's account in class)

HOME TASK

Plan your final project

My notes

PREPARE

- [ ] API key in Colab secrets, never in the code
- [ ] Small working demo app
- [ ] Fallback: exported Teachable Machine model

Watch out: Never let the key reach GitHub. Remove it before students push code.

Week 6 Build a project: a study helper or an image recogniser

IN CLASS

Build your project step by step with teacher help

HOME TASK

Keep building and note your questions

My notes

PREPARE

- [ ] Project idea list with difficulty levels
- [ ] Template notebooks
- [ ] Milestone checklist

Watch out: Projects are too big. Agree on a minimum version first.

Week 7 Portfolio and GitHub for college applications

IN CLASS

Write a README, push your code and learn to describe your projects

HOME TASK

Finish your README

My notes

PREPARE

- [ ] README template: what, why, how to run, screenshots, what I learned
- [ ] Example GitHub profile

Watch out: Show how to describe a project for college applications, but promise nothing about admissions.

Week 8 Showcase and careers in AI

IN CLASS

Present your project and talk about careers in AI and tech

HOME TASK

None. Celebrate!

My notes

PREPARE

- [ ] Careers talk outline: developer, data analyst, ML engineer, designer
- [ ] Showcase checklist

Watch out: Be honest: careers need much more learning. Never promise jobs or placements.
