

Learn AI the Smart Way

Free AI Workshop · Classes 9–12 · 2 hours to understand, train, study and build with AI

with Manish Chauhan, software developer

Today's mission

1. Understand

How chatbots really work

2. Train

Teach a computer and find its bias

3. Study

Prompts for boards, JEE and NEET

4. Check

Catch AI mistakes with NCERT

5. Build

Watch AI make an app live

6. Stay safe

Deepfakes, scams and honest use

Game: AI or not AI?

Instagram choosing your next Reel

A UPI app sending ₹100 to a friend

Google Lens reading a maths problem from a photo

Gmail moving an email to spam

Excel adding up a column with SUM

A traffic light on a fixed timer

How does a chatbot answer you?

A chatbot **predicts the next word**, again and again. It learned which words usually come next from a huge amount of text.

Reads billions of sentences

Learns which words go together

Predicts the next word, one by one

Finish the sentence

“The capital of India is ___”

“Every action has an equal and opposite ___”

“The best subject in school is ___”

Activity 1: Build a study detector

20 minutes · groups of 3–4

1. Open teachablemachine.withgoogle.com
2. Get Started → Image Project → Standard
3. Make 3 classes: Book, Pen, Nothing
4. Hold to record about 50 pictures for each
5. Click Train Model, then test it live

Training happens inside your browser. Don't save the project, and keep faces out of the camera.

The bias experiment

Try it with your detector

1. Train it with one person's hand and one book only.
2. Test it with a different person and a different book.
3. Does it still work? Why not?

Face unlock trained mostly on one skin colour

A hiring tool trained on past hires who were mostly men

A loan app trained only on big-city data

Big lesson: AI learns from data. If the data is unfair or narrow, the AI is too.

Break time!

10 minutes · water, snacks, stretch

Prompts that help you study

Weak

“Explain photosynthesis”

You get a long, textbook-style answer. You read it, nod, and remember nothing.

Strong

“I'm a Class 10 CBSE student. Explain photosynthesis in 5 short points, then ask me 3 questions to check I understood. Wait for my answers.”

Who you are + what you need + how + check me

Prompt challenge: you choose, I type

10 minutes · whole class

Board exams

“Make a 7-day revision plan for Class 10 Science, Life Processes, 1 hour a day”

Practice

“Give me 10 NCERT-level MCQs on Class 11 Laws of Motion, answers at the end”

JEE / NEET

“Explain the mole concept step by step with one solved example, then give me a similar problem”

Activity 2: Catch the AI mistake

12 minutes · pairs

1. Read the AI answer on your sheet
2. Open NCERT Class 10 Science, Life Processes
3. Circle every mistake
4. Write the correct fact next to it

Challenge

There are 4 mistakes. Which pair finds all 4 first?

The answer sounded sure. It was still wrong.

AI can sound sure and still be wrong

It predicts words that sound right. It does not check facts, and it can invent sources.

Before you learn it, check with:

- Your NCERT textbook
- Your school or coaching teacher
- Two trusted sources, not one

Live demo: AI builds an app

Ask

“Make a quiz web page with 5 questions on Life Processes and a score”

AI writes it

The HTML, CSS and JavaScript code, in seconds

Save and open

Save as quiz.html and open it in the browser

You change it

Add a timer, dark mode or more questions

AI writes code fast. You still have to understand it, test it and fix it. That's what builders learn.

Learn with AI, don't copy with AI

Learn: yes

- Explain a concept in simple words
- Quiz me and check my answers
- Make my revision plan
- Show me where my answer is weak

Copy: no

- Write my assignment for me
- Solve homework I hand in as mine
- Help me during a test or exam
- Paste AI text without saying so

Deepfakes and scams

Spot a fake

- Hands, fingers, ears look wrong
- Text in the picture is jumbled
- Light and shadows don't match
- Voice sounds flat or oddly calm

Common scams

- A “bank KYC” call asking for your OTP
- An easy part-time job that asks for a fee
- Instant loan apps that want your contacts and photos
- A cloned voice of a relative asking for money

Never share an OTP. Report fraud: call 1930 or visit cybercrime.gov.in, and tell a parent.

My 5 AI rules

1. Never share personal details, passwords, OTPs or photos with AI tools
2. Check important facts with NCERT or a teacher
3. Use AI to understand and practise, never to copy
4. Say when you used AI in your work
5. Never make or share fakes of real people

Exit ticket

3 minutes · on your own

1

One thing AI is good at

2

One thing AI gets wrong

3

One prompt you will use this week

Write on your card and hand it in on your way out. No names needed.
