FREE AI WORKSHOP · CLASSES 6–8

# Let's Learn AI: 2-hour workshop lesson plan

A hands-on introduction to AI where students guess, draw, train a computer, talk to AI and learn the golden rules of safe use. Use this plan with the slide deck “AI-Workshop-Slides-Class-6-8.pptx” (the same timings are in the slide notes).

| Workshop at a glance | |
|---|---|
| Who | One class group, Classes 6–8 (best with 20–35 students) |
| Duration | 2 hours, including a 10-minute break |
| Where | School computer lab (1 computer per 2–4 students) with a projector |
| Teacher | Manish Chauhan, with one school teacher present in the room |
| Students leave with | An AI model they trained themselves, 5 golden rules of safe AI, and a parents' sheet |
| Cost to school | Free |

## Learning goals

By the end of the workshop, every student can:

1. Explain AI in one sentence: a program that learns from examples and makes a guess.
2. Tell the difference between AI and a normal program, with an example of each.
3. Train a simple image model and show that better examples make it smarter.
4. Write a clear question (prompt) for an AI chatbot.
5. Name at least 3 golden rules of safe and honest AI use.

## Before the workshop

### One week before

☐ Confirm date, time, class, number of students and the lab with the school.

☐ Ask how many computers work, whether they have webcams, and the internet speed.

☐ Ask the school's rule on photos. Plan to photograph screens only, never students' faces, unless the school gives written permission.

☐ Print the parents' take-home sheet (one per student) with the QR code to themanishchauhan.in/ai-courses.

### The day before

☐ Test quickdraw.withgoogle.com and teachablemachine.withgoogle.com on your own laptop.

☐ Prepare a folder of 4–6 pictures for the “Real or fake?” game: half real photos, half AI-generated.

☐ Backup for no webcams: a folder of images of 3 objects (for example apple, banana, mango), 20 per object.

☐ Log in to your chatbot (ChatGPT or Gemini) on your laptop. Only you will type. Students do not log in.

☐ Download the slide deck to your laptop and a USB drive. Keep a PDF copy in case PowerPoint is not available.

### 30 minutes before class

☐ Open both websites on every lab computer and test one webcam.

☐ Connect your laptop to the projector, check sound off, and open the deck in presenter view.

☐ Write on the board: “AI = learns from examples + makes a guess”.

## What you need

| Item | Notes |
|---|---|
| Your laptop + charger + projector cable (HDMI/USB-C adapter) | Presenter view shows your notes |
| Lab computers with Chrome or Edge | 1 per 2–4 students; webcams for Activity 2 |
| Internet | Both websites need it; Teachable Machine training runs in the browser |
| Whiteboard and markers | For the formula and students' prompts |
| Parents' sheets (printed) | One per student |
| Pen drive with deck, PDF and backup images | In case the internet or laptop fails |

## Timeline

| Time | Segment | Slides | Students do |
|---|---|---|---|
| 0:00–0:08 | Welcome and today's mission | 1–2 | Listen, raise hands, learn 2 class rules |
| 0:08–0:15 | Game: AI or not AI? | 3 | Thumbs up / thumbs down for 6 examples |
| 0:15–0:20 | So what is AI? | 4 | Repeat the one-line definition |
| 0:20–0:35 | Activity 1: Quick, Draw! | 5 | Draw in pairs; the AI guesses live |
| 0:35–0:40 | Why right or wrong? | 6 | Share what the AI got right and wrong |
| 0:40–1:00 | Activity 2: Teachable Machine | 7–8 | Train a Rock-Paper-Scissors model in groups |
| 1:00–1:10 | Break | 9 | Water, snacks, stretch |
| 1:10–1:25 | Talking to AI + prompt challenge | 10–11 | Compare prompts; suggest their own |
| 1:25–1:37 | AI mistakes + real or fake? | 12–13 | Spot the fake pictures |
| 1:37–1:45 | Golden rules + pledge | 14–15 | Give examples; say the pledge together |
| 1:45–1:55 | Show and tell | 16 | Each group shows its model for 1 minute |
| 1:55–2:00 | What's next + parents' sheet | 17 | Take the sheet home |

# Step-by-step plan

## 0:00–0:08 · Welcome and today's mission

Slides 1–2 · **Goal:** Get attention and set expectations.

- Introduce yourself in one line and ask who has used AI before.
- Show the 5-step mission: Guess, Draw, Train, Talk, Stay safe.
- Set two rules: when your hand goes up, everyone is quiet; everyone gets a turn on the computer.

**Say:** *I'm Manish. I build websites and apps for companies, and I use AI every day. Today you won't just hear about AI, you will teach a computer something yourself.*

**Hindi tip:** "Aaj hum AI ke baare mein sirf sunenge nahi, khud computer ko kuch sikhayenge!"

## 0:08–0:15 · Game: AI or not AI?

Slides 3 · **Goal:** Students discover the difference between learning and fixed rules.

- Read each card. Students show thumbs up for AI, thumbs down for not AI.
- After each vote, reveal the answer and the reason (see the answer key).

**Say:** *If it LEARNS from examples, it's AI. If it only follows fixed rules, it's not.*

| Card | Answer and reason |
|---|---|
| YouTube suggesting your next video | AI: learns from what millions of people watch |
| A calculator doing 25 × 4 | Not AI: follows fixed maths rules |
| Google Maps finding a faster road | AI: learns traffic patterns |
| A light switch | Not AI: on/off, nothing learned |
| Phone unlocking with your face | AI: learned your face from examples |
| An alarm clock ringing at 6 am | Not AI: follows the time you set |

## 0:15–0:20 · So what is AI?

Slides 4 · **Goal:** One clear definition every student can repeat.

- Read the definition and ask the class to repeat it together.
- Use the dog example: nobody gave you rules for "dog"; you saw many dogs and found the pattern.

**Say:** *AI makes GUESSES, and guesses can be wrong. Remember this, we'll come back to it.*

**Hindi tip:** "AI bahut saare examples dekh kar pattern pehchanta hai, aur phir andaza lagata hai."

## 0:20–0:35 · Activity 1: Quick, Draw!

Slides 5 · **Goal:** Students see an AI guessing in real time.

- Demo one round on the projector first.
- Pairs: one draws, one watches, then swap. Each round has 6 drawings of 20 seconds.
- Walk around and ask: "Why do you think it guessed that?"
- Challenge: which pair gets the most drawings guessed out of 6?

**Say:** *Draw fast and simple. The AI has seen millions of drawings, so let's see if it understands yours.*

**Privacy:** Google may keep the drawings (without names) to improve the game. Students must not write names or personal details.

## 0:35–0:40 · Why right or wrong?

Slides 6 · **Goal:** Connect results to the idea of training data.

- Ask 2–3 pairs what the AI got right and wrong, and why.

- Lead to the lesson: more and better examples = better AI.

**Say:** *Now YOU will be the teacher and give the computer its examples.*

## 0:40–1:00 · Activity 2: Teachable Machine (main activity)

Slides 7–8 · **Goal:** Every student trains an AI model and improves it.

- Demo all 5 steps on the projector (about 3 minutes).
- Groups of 3–4: open teachablemachine.withgoogle.com → Get Started → Image Project → Standard image model.
- Rename the classes Rock, Paper and Scissors. Each student records one class (hold the button for about 50 pictures).
- Click Train Model, then test it live with hand signs.
- When it makes mistakes, show slide 8 and let them retrain: more pictures, different angles, a “Nothing” class, different hands.
- Fast groups: add a 4th class or try their own idea (thumbs up / thumbs down, a pen vs. a pencil).

**Say:** *You just trained an AI. You decided how smart it got, by choosing the examples.*

**Backup if there are no webcams:** use “Upload” and the folder of fruit images. Train Apple / Banana / Mango instead.

**Privacy:** Teachable Machine trains inside the browser. Webcam pictures are not uploaded unless someone chooses to save the project. Ask students not to save.

## 1:00–1:10 · Break

Slides 9 · **Goal:** Rest, and reset the room.

- Students get water and stretch.
- You: set up the chatbot on your laptop and check the projector.

## 1:10–1:25 · Talking to AI + prompt challenge

Slides 10–11 · **Goal:** Students learn that clear questions get useful answers.

- Explain simply: chatbots learned from huge amounts of text and predict words one by one.
- Type the unclear and the clear prompt live and compare the answers.
- Write the formula on the board: WHO it's for + WHAT you want + HOW (length or format).
- Run 2–3 prompts from slide 11, then take students' own prompts. Write them on the board first and check they are appropriate, then type them.
- After each answer ask: “Is this correct? How can we check?”

**Say:** *AI can help you practise, like making quiz questions, but the learning still happens in your own head.*

**Important:** Most chatbots are for users aged 13 and above. Students do not log in or type on chatbots. Only you type, on the projector, with your own account.

## 1:25–1:37 · AI mistakes + real or fake?

Slides 12–13 · **Goal:** Students learn that AI can be wrong and that fakes exist.

- Ask the chatbot something local or very recent (for example, last year's school sports day winner). Discuss what happens.
- Show the prepared pictures one by one; students vote real or fake. Use the 4 clues: hands, text, light, too perfect.
- Make the serious point: making fake pictures of real people hurts them and can be against the law.

**Say:** *AI is like a very fast friend who sometimes guesses. Always check important things with your book, teacher or parents.*

## 1:37–1:45 · Golden rules + pledge

Slides 14–15 · **Goal:** Safe and honest habits that parents and teachers care about.

- Read each rule. Ask a student for an example of breaking it and following it.
- Stress rule 3: use AI to learn and practise, not to copy homework.
- Everyone stands and says the pledge together.

**Say:** *I will use AI to learn, to create and to help, and I will always be safe, honest and kind.*

## 1:45–1:55 · Show and tell

Slides 16 · **Goal:** Every group feels proud of what it built.

- Each group shows its model working for 1 minute and says one thing that made it smarter.
- Everyone claps for everyone.
- Take photos of screens only (not faces), and only if the school allows it.

## 1:55–2:00 · What's next

Slides 17 · **Goal:** A friendly close and a clear next step for parents.

- Thank the students, the teacher and the principal.
- Hand out the parents' sheet. Mention the free demo class and free admission for the first 20 students.
- No hard selling to children. Parents decide.

**Say:** *If you enjoyed today, show this sheet to your parents. There's a lot more we can build together.*

## If something goes wrong

| Problem | What to do |
|---|---|
| Internet is slow or down | Run Quick, Draw! and Teachable Machine as a demo on your laptop (use your phone hotspot). Do the AI or not AI game, golden rules and real-or-fake game offline from the slides. |
| No webcams in the lab | Teachable Machine with “Upload” and your fruit images folder, or students come to your laptop's webcam group by group. |
| Too few computers | Groups of 4–5 with clear roles: recorder, trainer, tester, reporter. Rotate roles. |
| A group finishes early | Add a 4th class, test with a different person's hand, or try thumbs up / down. |
| Shy or quiet class | Use thumbs up/down and group answers instead of asking individuals. Praise every attempt. |
| Running late | Shorten the prompt challenge to 2 prompts and the real-or-fake game to 3 pictures. Never skip the golden rules. |
| A student types something inappropriate | Stay calm, close it, and remind everyone of rule 5 (be kind). Inform the class teacher privately. |

## Safety and privacy checklist

- Students never create accounts or log in to any AI tool during the workshop.
- Only the teacher uses the chatbot, on the projector.
- No names, phone numbers, addresses or photos of students are typed into any AI tool.
- Teachable Machine projects are not saved; close the tabs at the end.
- Photos of screens only, never faces, unless the school gives written permission.
- A school teacher stays in the room for the whole workshop.

## Adapting it for Classes 9–12

- **Slides 3–4:** add how chatbots predict the next word, with a quick “finish the sentence” game.
- **Activity 2:** keep Teachable Machine, then discuss bias: what happens if all the training pictures come from one person's hand?
- **Prompt challenge:** use study prompts: a one-week revision plan for a board chapter, 10 practice MCQs on a NCERT topic, explaining a JEE/NEET concept step by step.
- **AI mistakes:** check one AI answer against the NCERT textbook in class, and talk about academic honesty and plagiarism.
- **Close:** point to the Classes 9–12 course: AI for study, building websites, Python and AI projects.

## After the workshop

- ☐ Same day: send the principal a thank-you message with 2–3 screen photos (if allowed) and what students built.
- ☐ Ask the school for a 5-minute chat about running a weekly AI club or a second workshop.
- ☐ Note what worked and what to change next time (timing, examples, tech issues).
- ☐ Follow up with parents who message you within 24 hours, with the demo class timing and fees.

### Quick feedback questions (for students, by show of hands)

1. What was the most fun part: drawing, training or talking to AI?
2. Would you like to learn more about building with AI?
3. Which golden rule do you remember?
